

SENS-IN(-G) SPACES

EXPLORING VISUAL PERCEPTION IN LEARNING ENVIRONMENTS TO SUPPORT
CONCENTRATION AND REDUCE OVERSTIMULATION

VANESSA LONGO

**What if the classroom offered moments of retreat as well as learning?
These visualisations explore how light, materiality and spatial atmosphere
can create a calmer and more focused learning environment.**

**To evaluate the concept in practice, a series of 1:1 prototypes were tested
within an existing classroom environment. The following images document
the spatial atmosphere, material studies and first user interactions.**
